Experience

Software Engineer Intern

Jun 2026 – present

Distillery – AI-powered Creative Production Studio

San Francisco, CA

- ❖ Designing and building Proof Engine, a web platform that automates AI-generated brand assets (CEO headshots, quote cards, customer stories) for partner startups via a Gemini API image generation pipeline on Google Cloud
- ❖ Built an agentic company research pipeline using Python, Playwright, and web search to scrape and screenshot 75+ partner companies via GCP service account, with threaded bulk processing and SQLite-backed screenshot retrieval
- ❖ Engineered a Streamlit HITL review interface displaying scraped data side-by-side with Playwright screenshots, with a hard approval gate blocking all Google Sheet writes until human verification

Software Engineer

Sep – Dec 2025

Prompt Opinion – AI Healthcare Copilot Platform

Remote (Contract)

- ❖ Built an MCP server and AI agent tools enabling chatbot integration, orchestrating retrieval of multimodal patient data from an EHR, PostgreSQL database, and open health portals into unified FHIR-compliant REST API workflows
- ❖ Designed, developed, and tested full-stack features across a C# (.NET 9) backend and a TypeScript front end, collaborating with Product and Design through the full development lifecycle from user stories to deployment
- ❖ Wrote unit tests validating MCP tool inputs and outputs and integration tests in GitHub Actions verifying MCP tool structure, catching regressions before deployment

Software Engineer Intern

Jun – Aug 2025

Darena Health – AI-enabled, FHIR-first EHR

Remote

- ❖ Built an MCP server and retrieval pipeline connecting an LLM-powered clinical chatbot to a FHIR-compliant EHR, enabling real-time patient data retrieval to power CVD risk scoring models and clinical trial matching
- ❖ Containerized and deployed the MCP server and data-integration pipeline using Docker and Kubernetes, providing consistent, isolated environments for bidirectional FHIR data exchange and improving stability for new features

Full Stack Developer Intern

Aug 2025 – Jul 2026

Fung Institute for Engineering Leadership – UC Berkeley MEng Program

Berkeley, CA

- ❖ Built and shipped an interactive React and D3.js analytics dashboard with keyword-frequency analysis over 225+ live projects, translating stakeholder requirements into a production internal tool serving 450+ MEng students

Education

University of California, Berkeley

Grad May 2026

B.A. Data Science

Berkeley, CA

- ❖ Coursework: ML, Data Engineering, Data Structures, Probability Theory, Numerical Analysis
- ❖ Concentration in Applied Math & Modeling; Clubs: Cal VSA Lion Dance (Music Lead)

Projects

Spotify Music Trend Analytics Pipeline

Real-Time Streaming Pipeline for Music Trend Analysis on GCP

- ❖ Built an end-to-end real-time analytics pipeline ingesting Spotify API data via Kafka, processing streams with PySpark, orchestrating batch jobs with Airflow, and transforming data in BigQuery using dbt, serving trend insights through an interactive D3.js dashboard deployed on GCP

LLM Stock Trading Benchmark – github.com/vkethana/calhacks-24

Multi-LLM Evaluation Framework for Comparing Model Decision-Making from News Headlines

- ❖ Built a full-stack React/Flask app integrating multiple LLM APIs (Groq) into a code-execution pipeline, applying React state memoization and performance tuning to handle 300+ queries per period while minimizing render overflow, developed AI-assisted with Claude and Cursor

Skills

- ❖ TypeScript, JavaScript, Python, SQL, C# (.NET), React, Vue, Vite, Node.js, Next.js, Express.js, D3.js, Fast API, Flask, HTML, CSS, PostgreSQL, MongoDB, Java, Azure, Airflow, Scala, Docker, Kubernetes, Git, CI/CD, REST API, Agile
- ❖ AI Skills: Anthropic Claude API, Gemini API, Groq API, MCP (Model Context Protocol), Claude Code, Cursor
- ❖ Personal/Hobbies: Lion Dance, LEGOs, Bouldering, Videography, Guitar, Piano, Table Tennis, Chess
