Experience

Software Engineer

Sep 2025 – present

Prompt Opinion – AI Healthcare Copilot Platform

Remote (Contract)

- ❖ Engineered and integrated MCP tools and AI Agents in C# (.NET 9), implementing FHIR-compliant API workflows and reducing LLM-EHR data retrieval latency through optimized HTTP pipelines of patient data and Vue.js caching
 - ❖ Developed and maintained full-stack features using Vue.js, TypeScript, Vite, Node.js build tooling, and PostgreSQL; deployed to Azure cloud using Docker and GitHub Actions, with automated test and lint pipelines
- Vue / TypeScript / C# .NET / PostgreSQL / Azure / Node.js / Docker*

Data Analytics & UX Intern

Aug 2025 – present

Fung Institute for Engineering Leadership – UC Berkeley MEng Program

Berkeley, CA

- ❖ Cleaned, aggregated, and analyzed multi-source pulse-survey data using Python and automated quality checks, producing reliable program metrics that informed Capstone Project resource allocation for 450+ MEng students
 - ❖ Developed a comprehensive MAS-E course-planning tool with automated prerequisite checks and forecasting logic, and integrated its data flows with Salesforce to unify advising and reporting across the program
- Python (Pandas) / JavaScript (Apps Script) / Salesforce / Google Sheets*

AI & Data Science Intern

Jun – Aug 2025

Darena Health – AI-enabled, FHIR-first EHR

Remote

- ❖ Built an MCP server and data-integration pipeline connecting an LLM-powered clinical chatbot to an EHR, enabling real-time retrieval of patient FHIR data for CVD risk scoring and clinical trial matching
 - ❖ Containerized and deployed the MCP server and data-integration pipeline using Docker and Kubernetes, providing consistent, isolated environments for bidirectional FHIR data exchange and improving stability for new features
- TypeScript / Node.js / Docker / Kubernetes*

Frontend Web Developer Intern

Aug 2023 – Aug 2024

Digital NEST – Web & Graphic Design Nonprofit

Gilroy, CA

- ❖ Coordinated with clients in education and recreation to produce, develop, and maintain websites using WordPress, JS, PHP, and SEO optimization, boosting page visits by 200% and sustaining an average 36% bounce rate
- TypeScript / JavaScript / jQuery / WordPress / PHP / React / Node.js / Python*

Education

University of California, Berkeley

Expected Grad May 2026

B.A. Data Science

GPA: 3.76

- ❖ Coursework: ML, Data Engineering, Data Structures, Probability Theory, Numerical Analysis
- ❖ Concentration in Applied Math & Modeling; Clubs/Orgs: Cal VSA Lion Dance (Music Lead)

Gavilan College, Dual Enrollment with High School

Grad May 2023

A.S. Computer Programming | A.A. Natural Science

GPA: 3.95

Projects

LLM Stock Trading Benchmark – github.com/vkethana/calhacks-24

Flask/React App for Testing Profit Net Loss from LLM Stock Trades Based on News Headlines

- ❖ Built an LLM-driven trading pipeline on Groq for low-latency inference, generating keyword-based stock trades
 - ❖ Optimized Flask-React request flow via state memoization, supporting 300+ trade queries per evaluation period
- Flask / Python / React / TypeScript / Node.js / Groq*

American Sign Language Vision-to-Text Translator – jamesvdinh.github.io/asl-translator

CNN Model Trained on a Dataset of 87,000+ Gesture Images

- ❖ Implemented a feedforward neural network with 128-unit and 256-unit ReLU layers that classified inputs across 29 categories on a live camera feed input; Used binary cross-entropy loss & SGD to achieve an AUC of 0.97
- Python (Pandas, Scikit-learn, Seaborn) / TensorFlow / MediaPipe / OpenCV / JavaScript*

Skills

- ❖ Python, TypeScript, JavaScript, React, Vue, NodeJS, jQuery, WordPress, Wix Velo, PHP, Azure, PostgreSQL, GraphQL, SQL, R, C# (.NET), C++, Java, Docker, Kubernetes, Flask, HTML, CSS / SASS, Git, REST API, TensorFlow
- ❖ Personal: Boulderling, Lion Dance, Videography, Guitar, Piano, Table Tennis, Chess, Badminton
